

PLENTICORE plus remains in the programme

+ Battery activation code permanently reduced

Save over
€400 now!

And what do you have to do? Nothing! KOSTAL is permanently reducing the number of PLENTICOINS for retrieving the battery activation code from **3 to 1 PLENTICOIN** for all PLENTICORE plus (G1/G2) inverters.

Tip: If the KOSTAL Energy Meter (KEM) is included in the installation, installers save a further price advantage of over €100.

Fair and transparent: the KOSTAL activation code

“Only to pay for what you need and when you need it” - that’s what makes the KOSTAL activation code fair and transparent. With the battery activation code, PLENTICORE plus becomes a hybrid inverter. Compatible with a large number of well-known storage partners, the planning of solar systems with a battery becomes as flexible as possible.

Good reasons to choose a KOSTAL inverter. Made in Germany.

The sophisticated PLENTICORE plus series has an excellent price/performance ratio and, thanks to its 10-year warranty (Smart Warranty) and 3 MPP trackers, is also a real insider tip for system expansion or repowering.

KOSTAL scores with high quality and modern safety standards - this is what makes the inverters so popular.
